

# STEM CELLS *and* REGENERATIVE MEDICINE

Stem cells are the body's natural healing resource. Our treatments take stem cells from donor tissue and inject them into an injured area to relieve pain, promote healing and often help avoid surgery.

## WHAT IS STEM CELL THERAPY?

Stem cell therapy is a form of regenerative medicine that utilizes the body's natural healing mechanism to renew and repair diseased or damaged tissues. Stem cells are present in all of us acting like a repair system for the body. However, with increased age sometimes the optimum amount of stem cells is not delivered to the injured area. Many of our patients visit us after exhausting all other remedies and want an alternative to invasive surgery.

## THE TREATMENT

The treatment is a simple non-surgical injection into the affected joint with no down time or lengthy recovery. You may maintain your normal lifestyle and allow the cells to create a balanced optimal environment in your joints so your body can repair itself. You should feel maximal results within 10 to 12 weeks, yet the regenerative process can continue for six months or longer.

**STEM CELL THERAPY CAN HELP HEAL FASTER,  
GET QUICKER RESTORATION OF FUNCTION  
AND RELIEF FROM PAIN!**

## WHY CHOOSE STEM CELL THERAPY?

Advances in stem cell research have given doctors new hope that patients suffering from long-term pain may finally have an option for alleviating some of their discomfort. If you are suffering from one of the following conditions, you may be a candidate for treatment:

- Rotator cuff tendonitis and tear
- Tennis elbow
- Golfer's elbow
- Wrist strain or tendonitis
- Chronic back or neck pain
- Arthritis of the knee, hip, shoulder or ankle
- Tear of the meniscus
- Hip pain
- Labral tears of the shoulder or hip
- Chronic ankle strain / sprain
- Plantar fasciitis
- Achilles tendonitis
